

Blackridge Wind Energy

Operational Technology & Supplier Security Questionnaire

Blackridge Wind Energy is conducting a supplier security and operational resilience assessment for vendors providing software, infrastructure, engineering, or managed services supporting renewable energy operations and critical infrastructure environments. Please complete the questionnaire below and provide supporting evidence where applicable.

Document Type	Supplier Security & Operational Technology Questionnaire
Issued By	Blackridge Wind Energy
Industry	Renewable Energy & Critical Infrastructure
Issue Date	18 May 2026
Response Required	Yes

1. Do you maintain network segmentation between production and corporate environments?

Supplier Response:

2. Describe how privileged access to operational technology (OT) systems is controlled?

Supplier Response:

3. Are remote access sessions to critical systems logged and monitored?

Supplier Response:

4. Do you maintain documented disaster recovery procedures for critical services?

Supplier Response:

5. How frequently are backups tested for restoration capability?

Supplier Response:

6. Describe your approach to patch management for critical infrastructure systems.

Supplier Response:

7. Are endpoint protection solutions deployed across company-managed devices?

Supplier Response:

8. How are third-party contractors granted and managed access to systems?

Supplier Response:

9. Do you conduct risk assessments for new technologies or major infrastructure changes?

Supplier Response:

10. Describe how security incidents affecting operational systems are escalated.

Supplier Response:

11. Are security vulnerabilities tracked through a formal remediation process?

Supplier Response:

12. Do you maintain a formal supplier or third-party risk management process?

Supplier Response:

13. Describe your approach to securing cloud-hosted infrastructure and services.

Supplier Response:

14. Are privileged administrative activities logged and retained for audit purposes?

Supplier Response:

15. How do you ensure high availability of customer-facing or operational services?

Supplier Response:

16. Do you use automated monitoring and alerting for critical infrastructure?

Supplier Response:

17. Describe your secure configuration management process.

Supplier Response:

18. Are penetration tests or independent security assessments conducted periodically

Supplier Response:

19. How are employees trained on cyber security and operational security risks?

Supplier Response:

20. Please describe any compliance standards, certifications, or industry frameworks f

Supplier Response:

Please submit the completed questionnaire together with any supporting security documentation, policies, certifications, penetration test summaries, or audit reports where applicable.
